

VigiMac

keep an eye on your Mac

VigiMac is a free tool to track your Mac on the Net if it has been stolen.
VigiMac is not intrusive, and uses very low bandwidth.

Once the script is installed on your Mac, it is possible to know its location in case of theft (if it can connect on the Net and if you follow our few advices).

Every two minutes, your Mac will call our server.

In case of theft, send us an email and we will start recording any sign sent by your Mac to provide the police the Internet address of your thief.

Requirements : Any Mac with MacOS X 10.4 or later

- Installation

Step 1 : download the VigiMac package here : <http://www.vigimac.com/download/>

Step 2 : register your Mac here : <http://www.vigimac.com/register-your-mac/>

Step 3 : read our advices to complete the protection : <http://www.vigimac.com/important-hints/>

More information available on our website : <http://www.vigimac.com/faq/>

If you experience any problem, contact us : contact@vigimac.com

VigiMac can contain small bugs. Also the author declines any responsibility in case of issue or theft of your Mac.

We hope this software will be helpful and you'll never need to contact us.
